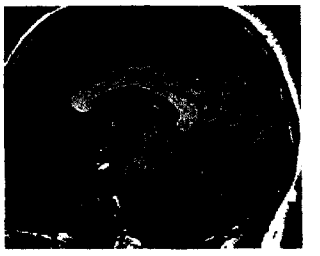
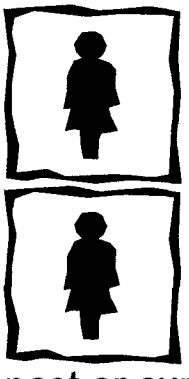
See your brain

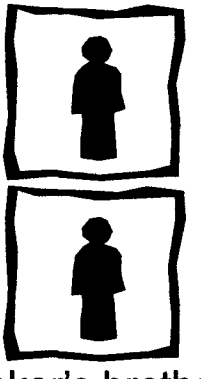


Have you ever smoked cigarettes?

Does your brother or sister smoke?



We are looking for pairs of adult brothers and pairs of adult sisters who have smoked cigarettes at some time.



Our research study compares brain activity of past or current cigarette smokers to brain activity from the smoker's brother or sister. We want to learn more about why people smoke.

In total, participation lasts about four hours and you will be compensated up to **$120**.

If you would like to participate or have any questions about the study please call (401) 455 6638 or E-mail: SmokingResearch@butler.org

Sponsored by the National Cancer Institute, Brown University Medical School, and Butler Hospital
