should not
be part of
your routine.

Women are needed to volunteer in a clinical research study. The purpose of this research study is to evaluate the safety and effectiveness of an experimental medication for the treatment of cyclic breast pain associated with fibrocystic breast tissue.

Women may be eligible to participate if they are between the ages of 18 through 50, have fibrocystic breast tissue (for example: nodules, cysts, fibrosis), and experience breast pain associated with their menstrual cycle. Other criteria apply.

Participation in this research study involves as many as eight visits to a local physician's office for a period of eight months and includes study-related examinations, lab tests, and study-related medication.
